UDACITY

Advanced Data Storytelling - Final

REVIEW
HISTORY

Meets Specifications

Bravo!! This is a truly top notch final project. Amazing work. Great animated chart and data story, great use of Flourish and narration

I hope you had fun time doing this project.
All the best

A guide to creating compelling visualizations

Chart Specifications

The animation should work to replicate a Hans Rosling animated bubble chart.
GREAT use of animation to illustrate changes in the relationship between CO2 emissions and Energy use. You added trails in some and not in others, which was interesting, and you selectively focused on specific regions and countries that brought out fascinating trends.

A value should be specified for each of these. The bubble chart should include an appropriate column choice that reflects the story narrative.
Great choices for each of the axes. Your choice to put CO2 emissions on the (independent) x-axis and Energy use on the (dependent) y-axis was an effective way to let the reader consider how these variables are correlated.

Story Specifications

The Flourish story should include text tabs in the top navigation bar to showcase the storyline.

Great descriptions and use of text to allow the reader with speakers off or who cannot hear to follow along.

Students should include a legend, and a minimum of 3 navigation tiles.

Legend is clearly showing, and you went above and beyond with the different tiles, telling not just a good story, but a great one!

The story title page should include all the details to help inform the viewer with some background information about the author of the story, where they got the data from and which tool they used.

Amazing story title slide! Great choice of image, very creative choice of title / headline, and descriptive and helpful explanatory subtitle and narration text. Also included is your name and the data source call out to help the reader understand the context of this story, and who is telling it. Great job!

Narration

The story should include a script or a variant of the story that is captured on the audio track.

This is really where the story shines. The title slide, bubble charts, and animation are great, but your audio narration is truly amazing. You pose thoughtful questions throughout, point out very interesting details and trends, and help the reader come to a clear understanding of what's going on in this data set. Great use of vocal inflection. You not only demonstrate that you have learned how to upload audio to Flourish, you demonstrate that you understand how to tell a truly fascinating data story.

The story should include correct formatting and textual descriptions (including story title, chart title).

Nice job including a title(Remove copy from it) and simple descriptive sentence above the scatterplot itself, as this is helpful as the reader will be able to understand at a glance what the plot is showing them.
